GNUPLOT:

set datafile separator "," → to specify the delimiter used in your data file, in this case, a comma (,)

set terminal pdf → This sets the output to a PDF file.

set output 'histogram.pdf' → Specifies the output filename.

set title 'Marks Distribution Across Courses' → set title

set xlabel 'Courses' → set x axis label

set ylabel 'Marks' → set y axis label

set key outside top box → This positions the legend outside the plot

#for histogram

set style data histogram

set style fill solid border -1 → Ensures solid filling of histogram bars and no border.

set boxwidth 0.5 → in histogram...width of box

**plot 'que1.dat' using 2:xtic(1) title 'Marks 1' lc rgb "blue", **

**' ' using 3 title 'Marks 2' lc rgb "green", **

' ' using 4 title 'Marks 3' lc rgb "red"

#for stacked histogram

set style histogram rowstacked

set style data histograms

set style fill solid border -1

**plot 'que1.dat' using 2:xtic(1) title 'Marks 1' lc rgb "blue", **

**' ' using 3 title 'Marks 2' lc rgb "green", **

' ' using 4 title 'Marks 3' lc rgb "red"

#for linespoints

**plot 'data.dat' using 1:2 with linespoints title 'Facecream', **

**' ' using 1:3 with linespoints title 'Facewash', **

**' ' using 1:4 with linespoints title 'Toothpaste', **

**' ' using 1:5 with linespoints title 'Bathing Soap', **

**' ' using 1:6 with linespoints title 'Shampoo', **

' ' using 1:7 with linespoints title 'Moisturizer'

#Pie Chat

June Sales Data

facecream = 2760

facewash = 1555

toothpaste = 4890

bathingsoap = 7490

shampoo = 1890

moisturizer = 1555

total_sales = facecream + facewash + toothpaste + bathingsoap + shampoo + moisturizer

set terminal pdf

set output 'que_i.pdf'

set size square

set xrange [-1.2:1.2]

set yrange [-1.2:1.2]

Disable border, tics, and key

unset border

unset tics

unset key

Define darker colors for each segment

color_facecream = "#CC0000" # dark red

color_facewash = "#0033CC" # dark blue

color_toothpaste = "#009900" # dark green

color_bathingsoap = "#CCCC00" # dark yellow

color_shampoo = "#6600CC" # dark purple

color_moisturizer = "#CC6600" # dark orange

Calculate angles for each segment (proportional to sales)

angle_facecream = 360 * facecream / total_sales

angle_facewash = 360 * facewash / total_sales

angle_toothpaste = 360 * toothpaste / total_sales

angle_bathingsoap = 360 * bathingsoap / total_sales

angle_shampoo = 360 * shampoo / total_sales

angle_moisturizer = 360 * moisturizer / total_sales

Draw pie chart slices with distinct colors for each product

```

set object 1 circle at 0,0 size 1 fillcolor rgb
color_facecream fillstyle solid 1 arc
[0:angle_facecream]

set object 2 circle at 0,0 size 1 fillcolor rgb
color_facewash fillstyle solid 1 arc
[angle_facecream:(angle_facecream +
angle_facewash)]

set object 3 circle at 0,0 size 1 fillcolor rgb
color_toothpaste fillstyle solid 1 arc
[(angle_facecream +
angle_facewash):(angle_facecream + angle_facewash
+ angle_toothpaste)]

set object 4 circle at 0,0 size 1 fillcolor rgb
color_bathingssoap fillstyle solid 1 arc
[(angle_facecream + angle_facewash +
angle_toothpaste):(angle_facecream +
angle_facewash + angle_toothpaste +
angle_bathingssoap)]

set object 5 circle at 0,0 size 1 fillcolor rgb
color_shampoo fillstyle solid 1 arc [(angle_facecream
+ angle_facewash + angle_toothpaste +
angle_bathingssoap):(angle_facecream +
angle_facewash + angle_toothpaste +
angle_bathingssoap + angle_shampoo)]

set object 6 circle at 0,0 size 1 fillcolor rgb
color_moisturizer fillstyle solid 1 arc
[(angle_facecream + angle_facewash +
angle_toothpaste + angle_bathingssoap +
angle_shampoo):360]

```

Position labels with values around the pie chart,
ensuring they match each segment's color

```

set label 1 "Facecream\n2760" at -0.9,0.9 tc rgb
color_facecream font ",10"

set label 2 "Facewash\n1555" at 0.9,0.9 tc rgb
color_facewash font ",10"

set label 3 "Toothpaste\n4890" at -1.2,0 tc rgb
color_toothpaste font ",10"

set label 4 "Bathing Soap\n7490" at 1.2,0 tc rgb
color_bathingssoap font ",10"

set label 5 "Shampoo\n1890" at -0.9,-0.9 tc rgb
color_shampoo font ",10"

set label 6 "Moisturizer\n1555" at 0.9,-0.9 tc rgb
color_moisturizer font ",10"

```

Plot an empty function to render the chart
plot NaN notitle
